

Coal possibilities in North Dakota Sept. 28, 1883

Letter of September 28, 1883. [Re possibility of coal at Devil's Lake] "There is plenty of a fair quality of lignite... I explored that whole country with a practical coal geologist eleven years ago, and have a good knowledge of its value in that way." Might as well look for bananas on its trees as for coal. *also see Coal-North Dakota, Oct. 3, 1883*
