

Hill, L. W.

November 21, 1904

L. W. Hill to James J. Hill.

Discusses general conditions along the Great Northern line. The Granby spur has been connected and ore is coming in from the Rossland camp and from two or three mines nearby.

Track has been laid to the river at Fernie and a bridge is being built. Iron ore will pass last year's shipment and there are not nearly enough cars for the grain that is coming to market.
