Table of Contents

Introduction	1
1. What functions and data are required to manage electronic records in accord with archival requirements? Do data requirements and functions vary for different types of automated applications?	2
2. What are the technological, conceptual, and economic implications of capturing and retaining data, descriptive information, and contextual information in electronic form from a variety of applications?	11
3. How can software-dependent data objects be retained for future use?	12
4. How can data dictionaries, information resource directory systems, and other metadata systems be used to support electronic records management and archival requirements?	25
5. What archival requirements have been addressed in major systems development projects and why?	33
6. What policies best address archival concerns for the identification, retention, preservation, and research use of electronic records?	39
7. What functions and activities should be present in electronic records programs and how should they be evaluated?	49
8. What incentives can contribute to creator and user support for electronic records management concerns?	55
9. What barriers have prevented archivists from developing and implementing archival electronic records programs?	58
10. What do archivists need to know about electronic records?	61
Additional Questions	66

NHPRC Electronic Records Agenda 1991 Research Issues and Related References

Introduction

This document is intended to provide some indication of the diversity of resources that pertain to the ten questions of the National Historical Publications and Records Commission (NHPRC) “Research Issues in Electronic Records,” which were developed in 1991.

Many sources span more than one of the ten questions for the following reasons: their subject matter lies at the intersection between questions, they cover more than one question, or the wording of the questions is so general as to be coextensive (i.e. not mutually exclusive). The attempt to place each citation in one and only one place is a helpful exercise, since it reveals places where the questions could possibly benefit from further refinement or elaboration. Considerable work on these issues over the past decade has provided us with a more precise vocabulary for discussing many of them.

In addition to not being mutually exclusive, the original ten questions also do not seem exhaustive of the work relevant to electronic records. This document includes five additional questions (labeled A-E), which were not explicitly addressed in the research questions from the 1991 agenda.

Although many of the references are to recent work, the list is not intended to represent only the current state of the art. For example, works listed under Question A on “current trends and practices in electronic recordkeeping” include descriptions, claims and findings about recordkeeping at the time they were published.

1. What functions and data are required to manage electronic records in accord with archival requirements? Do data requirements and functions vary for different types of automated applications?
