WATER = POWER

There are two ways to think about power.
• Water can make power to run machines.
• The people who control water resources have power.

Who do you think decided how to use natural resources like land and water a long time ago?

Who do you think decides today?

Read the wall by the entrance to the museum. How does “what happened here” continue to affect YOUR world?

FOLLOW THE FLOUR

INSTRUCTIONS
1. Match each photo to the object or area in the museum
2. Read the question and fill in the blanks with your answer.
3. If an area is crowded, match a different photo.
4. Found all the answers? Get your prize from a staff person.

PENCILS?
At the desk outside the museum gallery.
Please return them when finished.
The year 1880 was Minneapolis’s first year as the “Milling Capital of the World.” What percentage of Minnesota farmland was planted with wheat?

What is this machine?

Why was it better than a millstone?

How are these two things connected?

USE YOUR BRAIN!

USE YOUR BRAIN!

Minneapolis went through many changes as it grew into a city.

What does Minneapolis mean? (Origins of Minneapolis)

What originally used the Stone Arch Bridge? (Shaping the City)

What transportation system opened up the suburbs for settlement in 1886? (Growth of the City)

What are two way these immigrant families use flour?

Read responses and add a thought at the talkback station.
