

Not to Scale, but based on Scale Drawings

Revised 10-5-2011

- Crate EMN #6 should be loaded **FIRST**, from the side door of the vehicle. It needs to be laid on its back and slid gently into the vehicle.
- Crates EMN #3 and EMN #4 should be loaded **SECOND** – in through the rear doors and should be placed on the floor of the transport vehicle. These two crates **CANNOT** be tipped. They can be lined up with the middle of the wheel well of the vehicle as shown on page 2.
- Crate EMN #2 should be loaded **THIRD** – in through the rear doors and should be placed on the floor of the transport vehicle. This crate is heavy.
- Crate EMN #1 should now be loaded on top of Crate EMN #2, and should extend over the wheel well of the vehicle.
- The Blanket Wrapped Media Kiosk should always be laid out on the floor of the transport van, at the rear of the vehicle. It should be loaded after Crate EMN #1.
- The Exterior AD Banner Bundle should always be laid out across the top of the rear of the load.
- The two (2) additional boxes of “Reddy Kilowatt” backpacks should be loaded on top of Crate EMN #6 as indicated below.
- The Four-wheel Dollies and the Tool Bag can be packed loosely as space allows, but should be near either the rear or the side doors, as they’re the last items to be loaded and the first things needed at the next venue.
- The space required for the pack as described is 53”w X 137”long total. Essentially the back of an extended-length cargo van.
